III.	What's it means to be agile?	05
IV.	Where is Agile used at CSC?	06
V.	The Agile Umbrella	07
VI.	Agile Learning	08
VII.	Our Messages	10

Agile Manifesto

Manifesto for Agile Software Development

We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value:

Individuals and interactions over processes and tools
Working software over comprehensive documentation
Customer collaboration over contract negotiation
Responding to change over following a plan

That is, while there is value in the items on the right, we value the items on the left more.

AGILE DEVELOPMENT IS A METHODOLOGY

Why do we need agile?

Managing Uncertainty – Origin of Agile

Uncertainty cannot completely be covered at the start, but has to be managed along the way.

Predictive Planning (Plan your Work - Work your Plan).
Requires stable requirements up-front.

Following a Plan

Traditional

- Long wait time before going to market
- 35% of requirements change during the project
- 60 % of the functionalities are never used

Agile

Responding to Change

- Less wait for the delivery
- Team embraces Change.
- Only high value generating features are developed

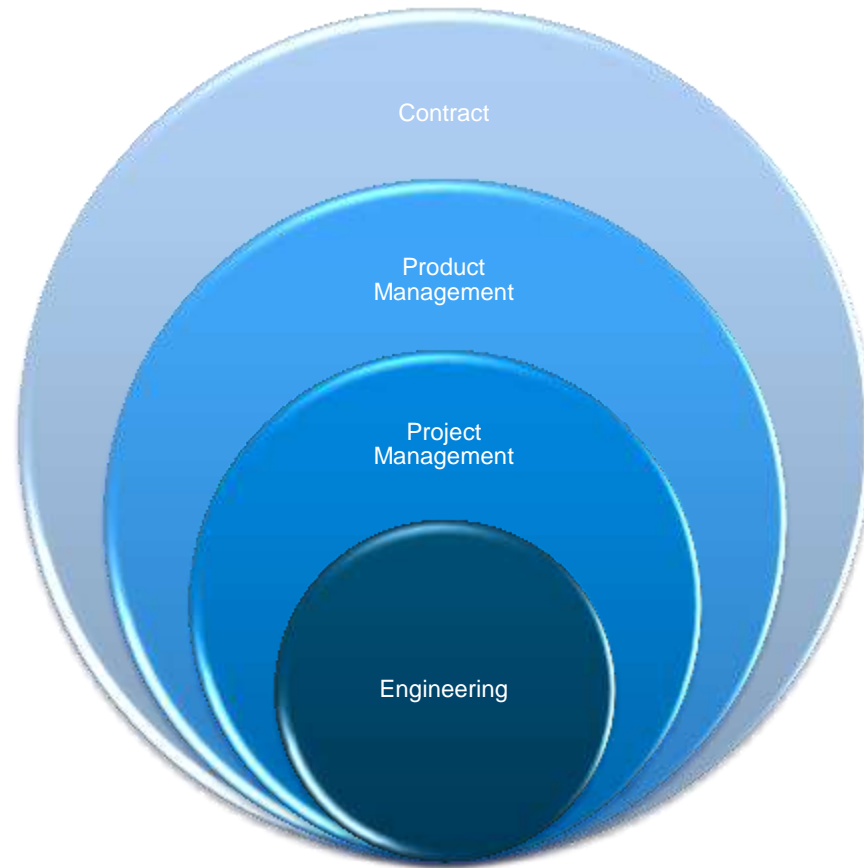

Adaptive Planning.
Evolutionary Software Design.
Can cope with unstable requirements.
Software Designed for Change.
Can be more competitive.

To avoid the blame game

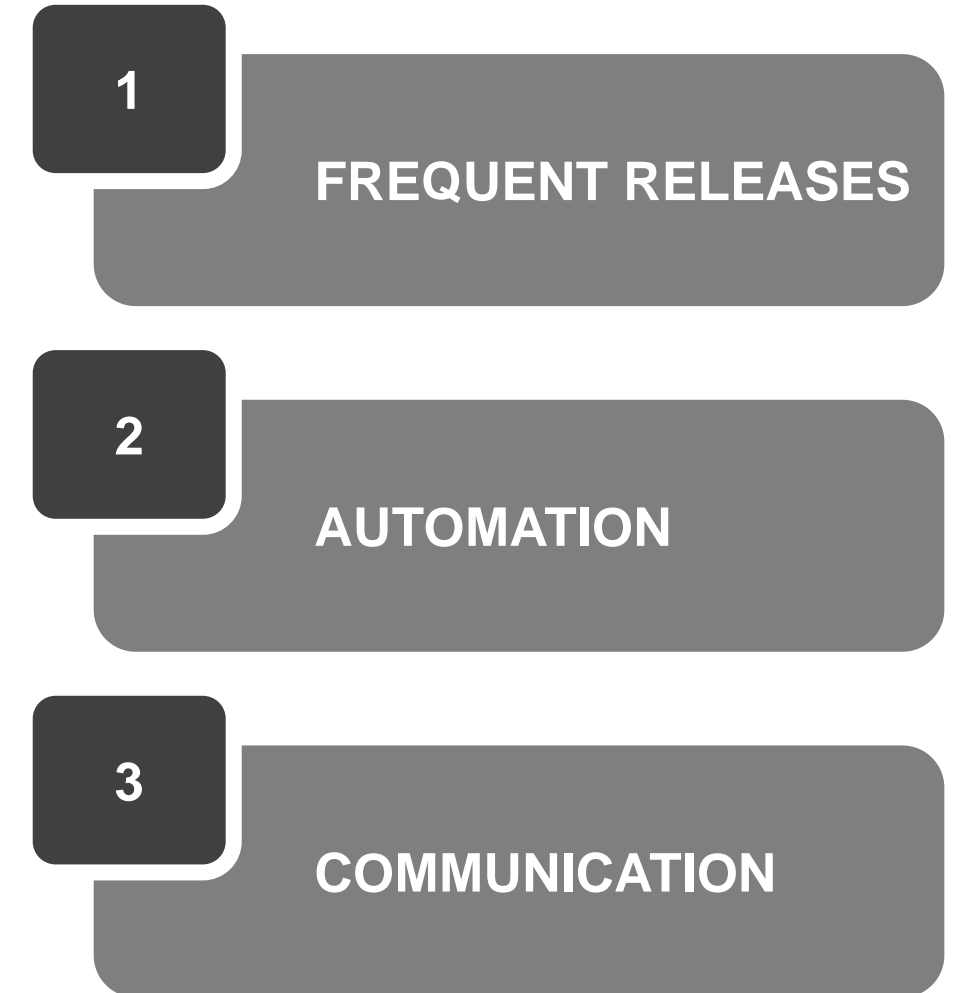

What's it means to be agile?

A Layered Agile Approach

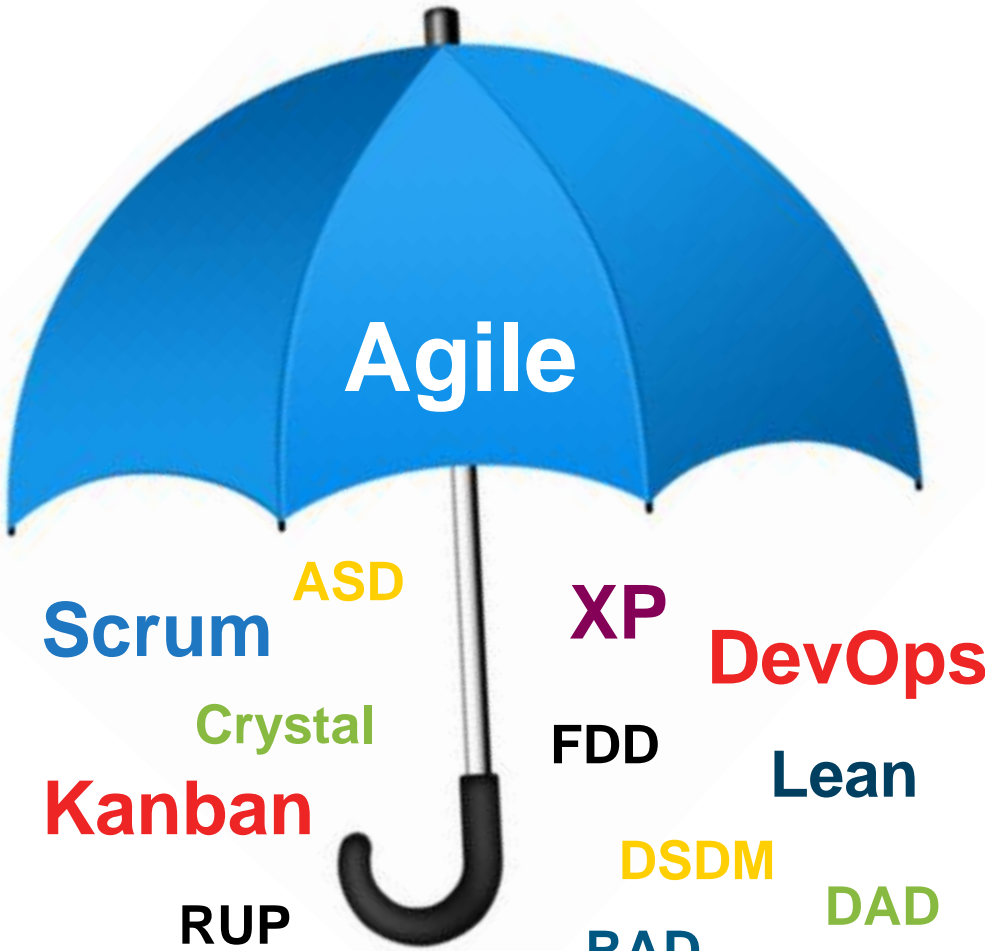

- **Agile Engineering**
 - Continual Delivery
 - Test Driven Development
 - Acceptance TDD
 - Internal TDD
 - Design / Refactoring
- **Project Management**
 - Scrum
 - Kanban
 - Scrumban
 - Estimating & Planning
- **Product Management**
 - Client-Oriented Product Ownership
 - Cadence & Synchronization
 - Just-in-Time Requirements
 - User Stories, Visualization, Use Cases
 - Traditional Product Management
- **Contract**
 - Shared Risk
 - Foster Collaboration
 - Optional Scope

Agile Development Highlights

The Agile Umbrella

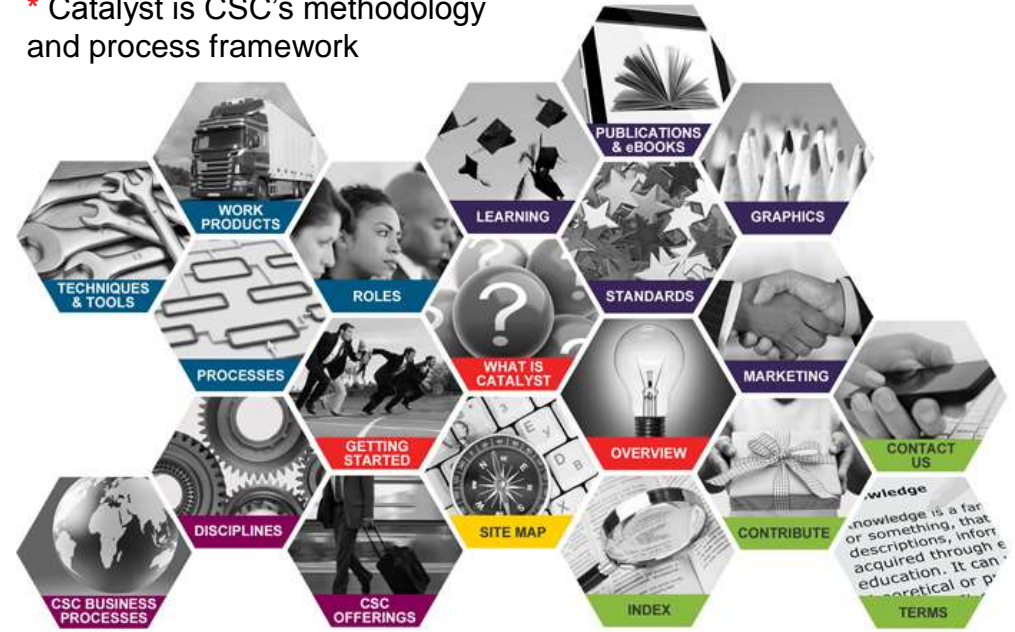

Many different agile methods, each with a slightly different focus. Most promote teamwork, collaboration, and process adaptability throughout the project life-cycle.

and few more...
... plus all the hybrids...

CSC has embedded Agile in Catalyst*

* Catalyst is CSC's methodology and process framework

Agile Scrum UX

- incorporates user experience elements into the Scrum process.

Applications Agile Scrum

- supports CSC's Global Business Services' Applications organization's Agile Scrum process.

Agile Scrum++

- is a hybrid agile process framework built on top of Scrum, with a focus on architecture and visualization.

OpenUP Lifecycle

- process is published as part of the open-source Eclipse Process Framework as an accompaniment to the EPF Practices Library.

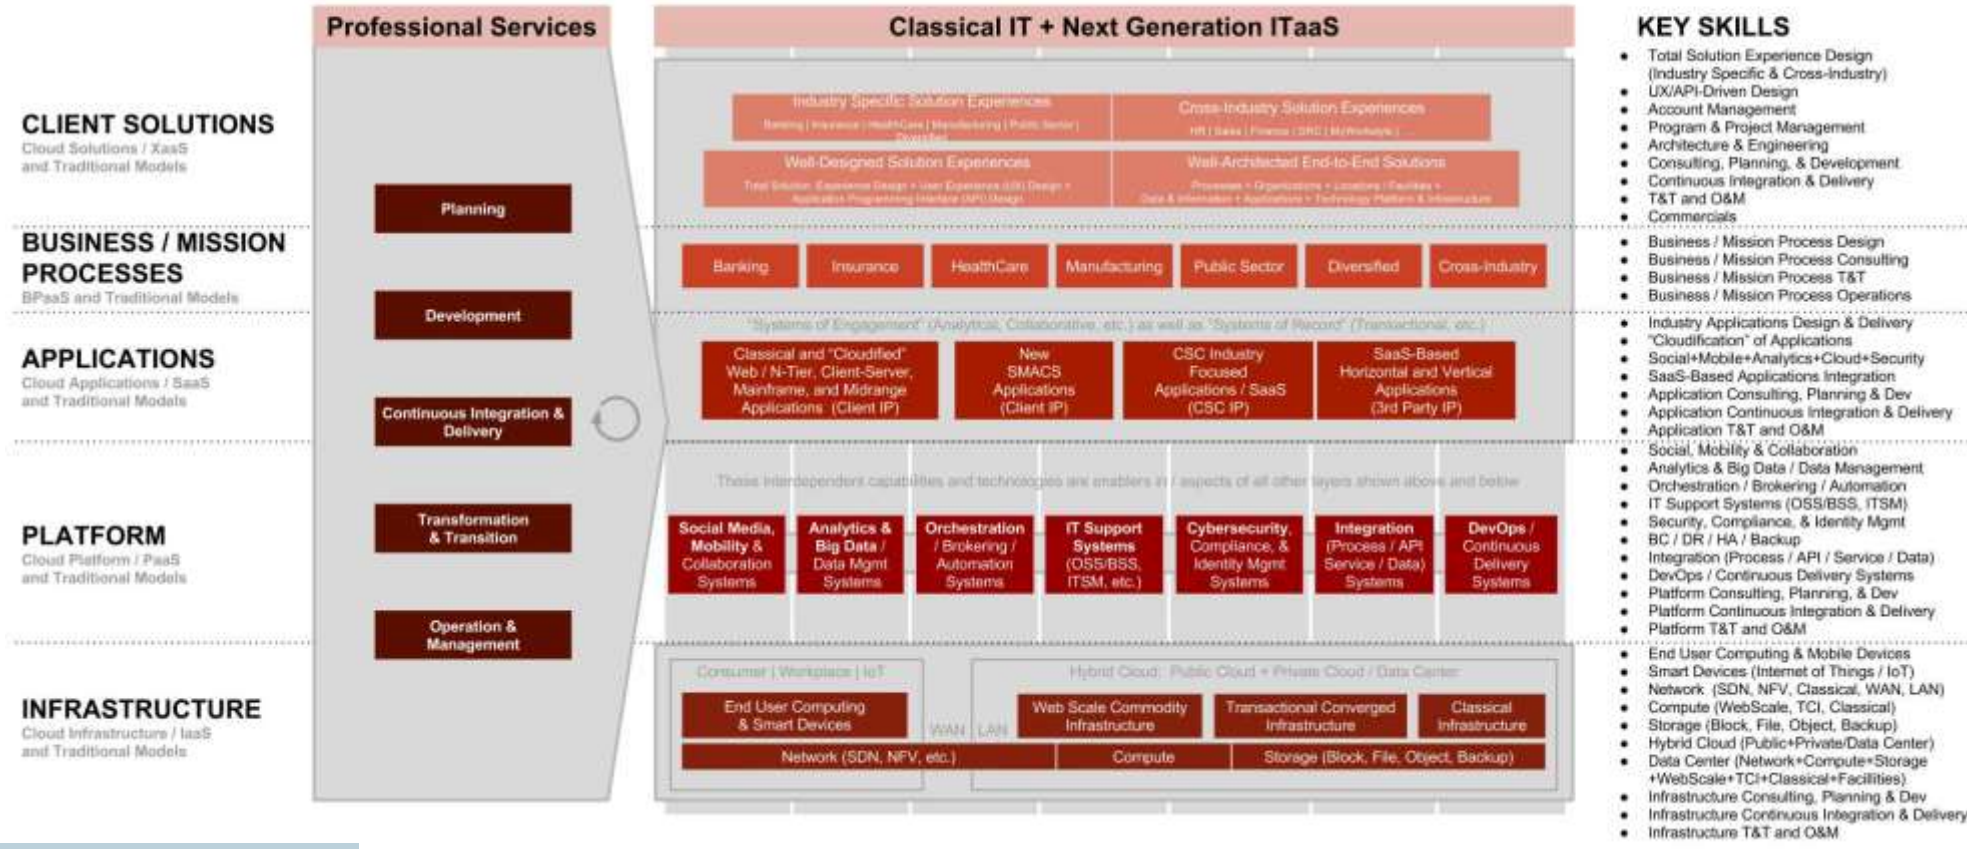

Agile Learning as part of CSC Technology Transformation

Our Focus Areas

For more insight take a look at January 27 2015 Technology Transformation Town Hall and CrowdChat:
<https://www.youtube.com/watch?v=wps74rvyG-Q>
 Next talk will take place April 14'th 2015
https://www.youtube.com/watch?v=0_f6fjD5neA

We offer capabilities, products, and services that we combine to create industry relevant client solutions

App Strategy to enable Agile Learning

CSC Utilizes Big Data Analytics to provide Agile Learning

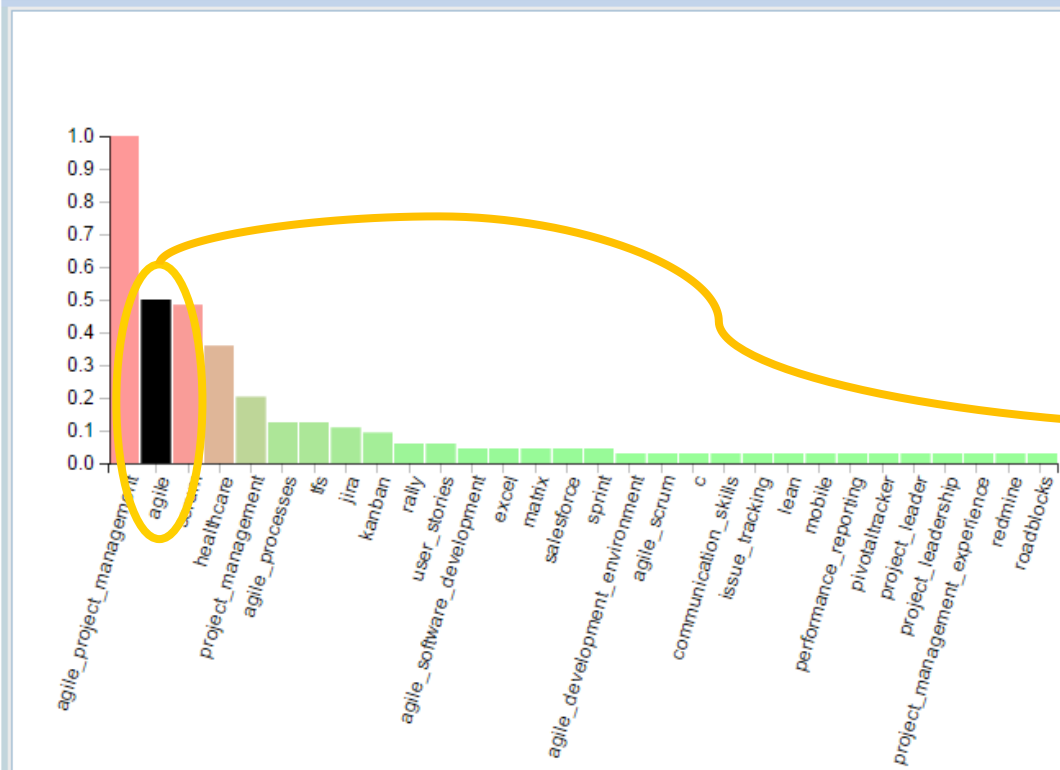

CSC has built its own Big Data Analytics Solution

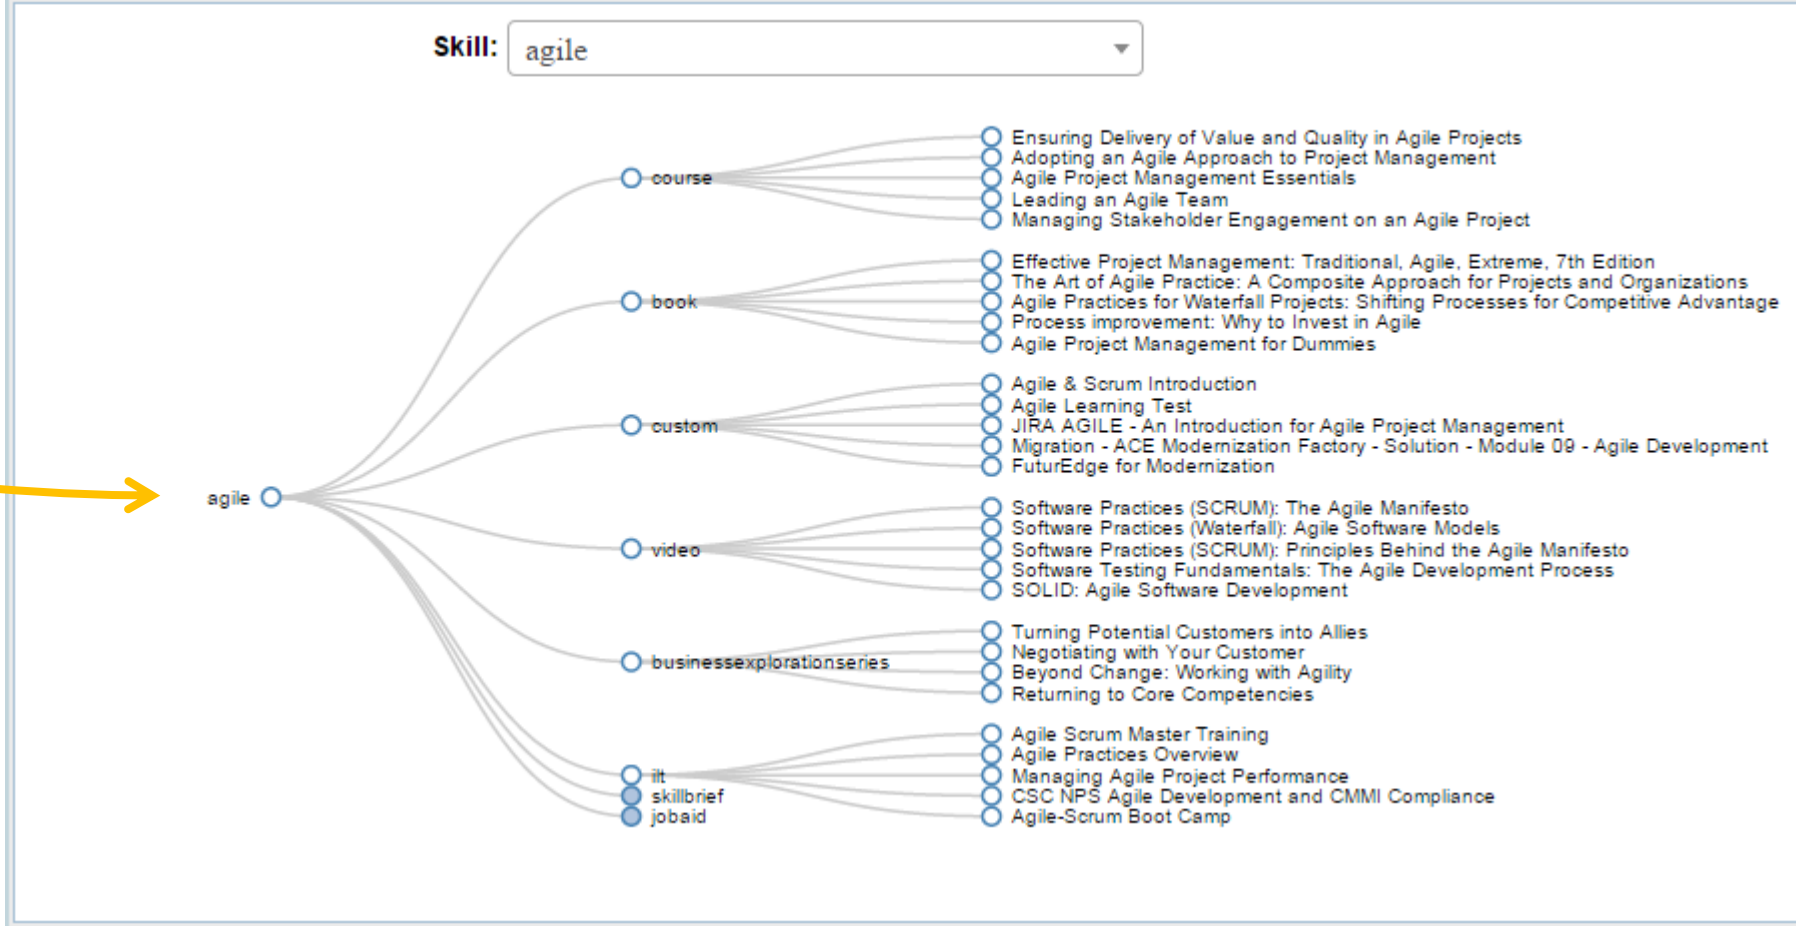

For more insight take a look at CSC TechTalk Soundbites:
Using Analytics to Guide Skills Development Planning and Enhance Our HR Systems

<https://www.youtube.com/watch?v=KIVrZxrGh4c>

Skill Importance by IT Domain: A bar chart of skills priorities by IT domain.

CSC University Learning Resources by Skill: Click on an asset type to find resources

Our Messages

- **CSC**
 - Faster Feedback on Ideas
 - More effective communication
 - Development never stops
- **Client**
 - Integrated into the process (elaborate on what the client put forward)
 - Decisions are not dangerous
 - Demands more
- **General**
 - Better products
 - More happy people
- **Learning**
 - People can more easy fit learning into busy schedule
 - Just in time learning creates better results due to close links to practicing new skills
 - Focused learning through CSC Future Tense (Big Data Analytics) and Individual Development Plans

Trust

To learn more you can read the CSC Paper *The Performance of Agile Methods: Comparison to Traditional Development Methods*.

Thank You

DEVOPS, AGILE DEVELOPMENT AND OPERATIONS

Claus Ljunggren
CSC Solution Architect
2015.04.13

Agenda

I.	What is Operations?	03
II.	What is DevOps?	05
III.	Automation	08
IV.	Practical Examples @ CSC	11

What is Operations?

@DEVOPS_BORAT

Confuse of Dev or Ops? Simple rule: if you are praise for Web site success, you are Dev; if you are blame when Web site down, you are Ops.

What is DevOps?

BuzzWord

DevOps is NOT a tool!

DevOps is NOT a role!

DevOps is not Dev and Ops!

Portmanteau of “Development” + “Operations”

Culturel And Professional Movement

Dev*Ops

What is DevOps?

Culture

No traditional development/operations silos, promotes communication between everyone involved in delivering applications, and emphasizes constant process and product improvement.

Automation

Automation is key. Treating infrastructure as code (using tools like Chef, Windows PowerShell® DSC, StatsD/Graphite, logstash, and Github) helps make operations a seamless fabric.

Measurement

Continuously monitoring applications and environments iteratively improves code and processes. Constant improvement is central to DevOps, and you can't improve what you can't measure.

Sharing

Combining siloed teams helps eliminate the pursuit of different, —and often conflicting—goals and metrics. Sharing ideas and improvements, creates a vital feedback loop for the entire app delivery process.

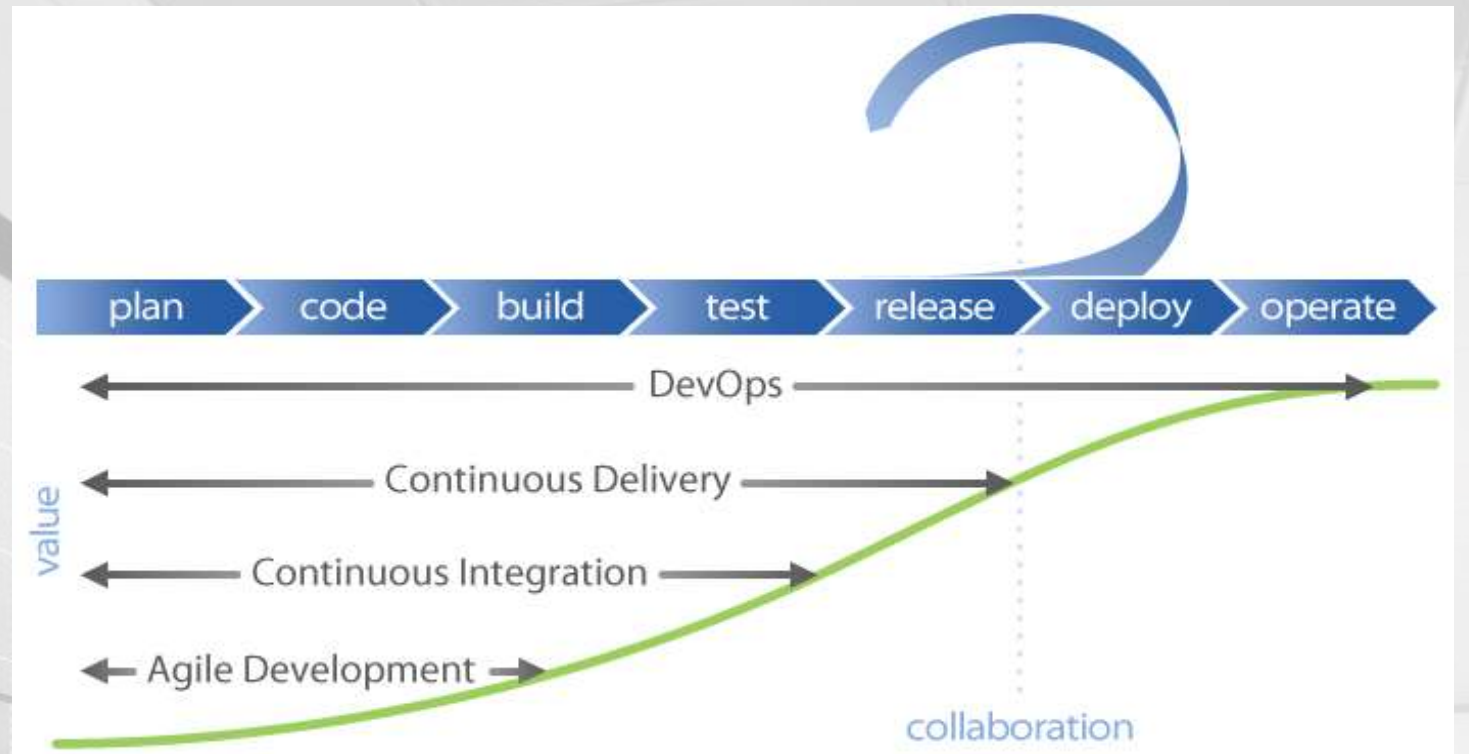

Application of DevOps Principles

Increased collaboration across competence areas, e.g. Business, Development, Integration, Test and Operations.

Increased automation, less errors, more time for value-adding activities.

Increased frequency in deployment of software services.

Increased quality of the deployed solutions and faster releases of new versions.

Automation

- **Reasons for Automation**

- Speed
- Reliability
- Security

- **What to automate**

- Everything 😊
- Infrastructure
- Build + Deploy
- Test
- Documentation

Automation - Infrastructure

The servers in today's data center are like puppies – they've got names and when they get sick, everything grinds to a halt while you nurse them back to health. Servers must be managed like cattle – you number them, and when they get sick and you have to shoot them in the head, the herd can keep moving.

It takes a family of three to care for a single puppy, but a few cowboys can drive tens of thousands of cows over great distances, all while drinking whiskey.

– Joshua McKenty (Adapted from a quote from Bill Baker, Distinguished Engineer @ Microsoft)

bowzer.csc.com

17258.csc.com

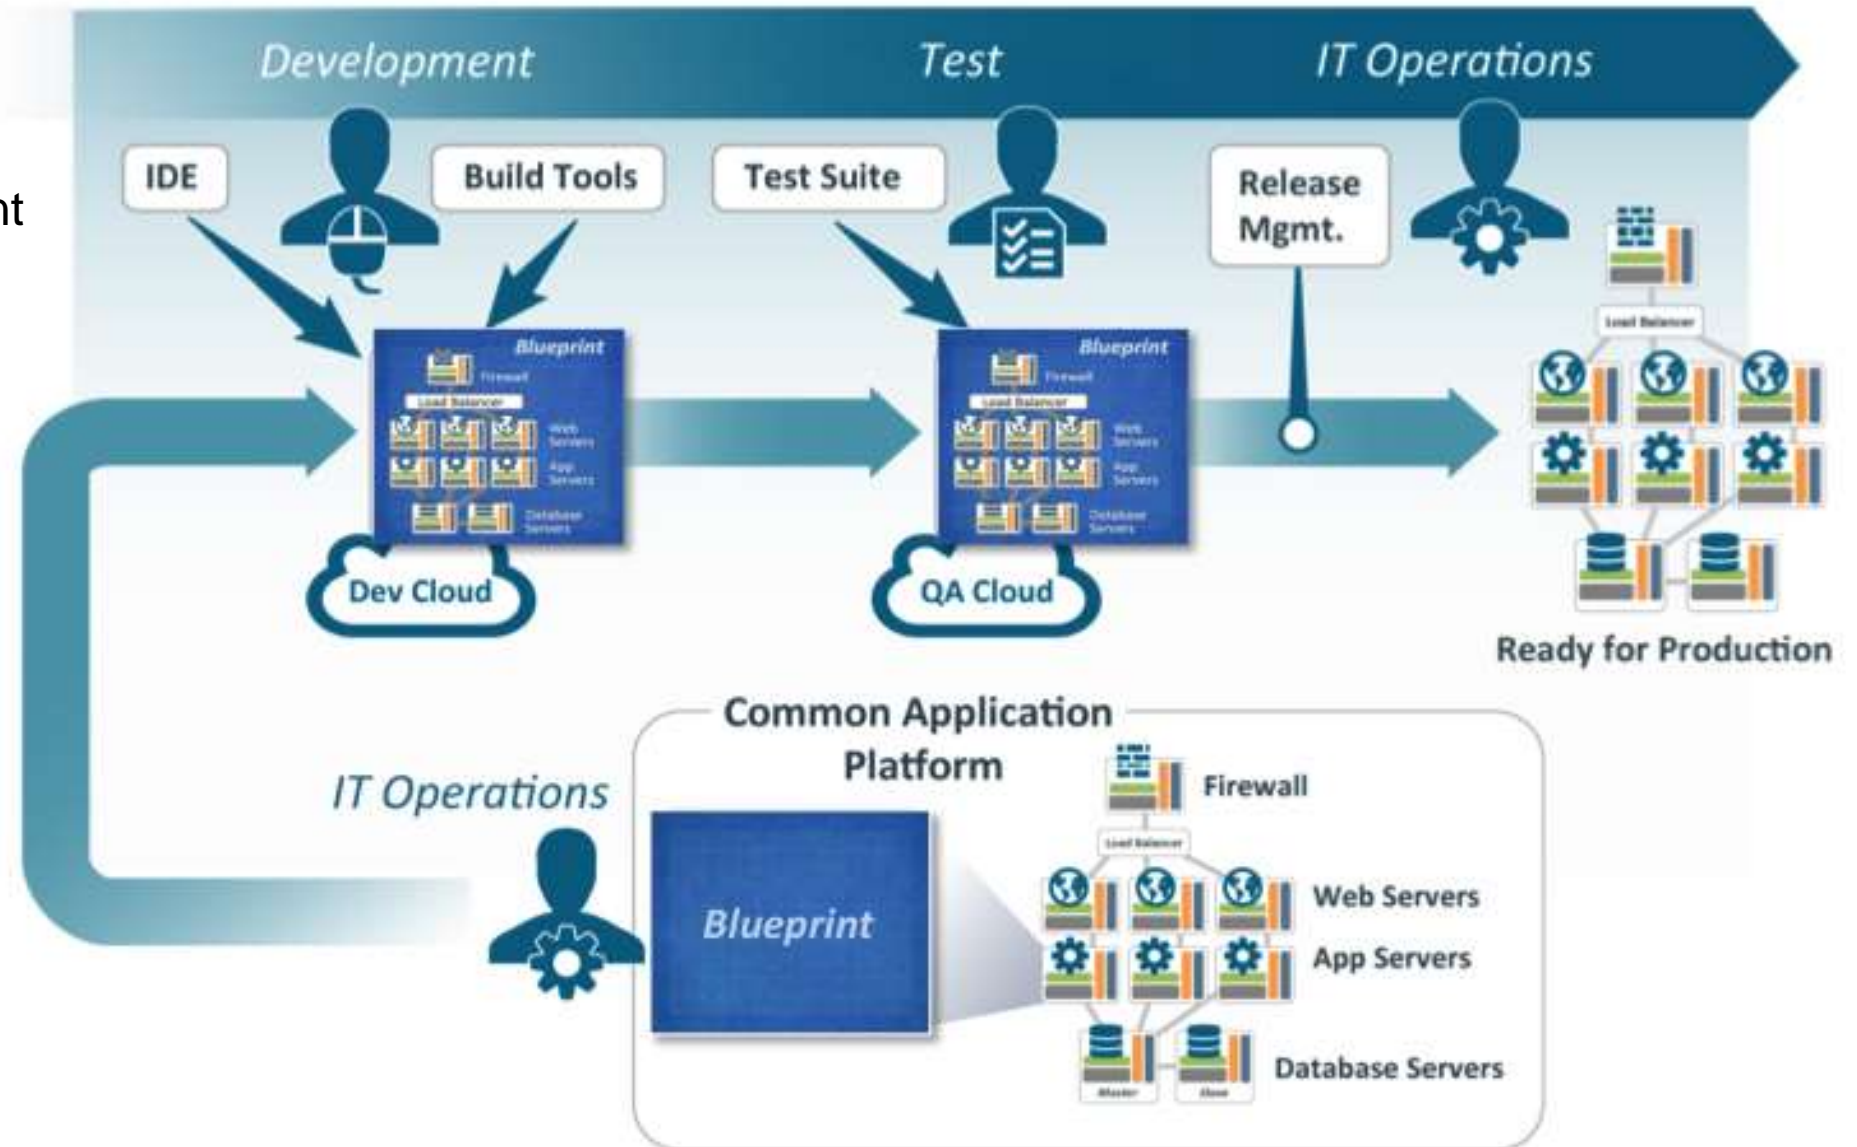

Automation - Infrastructure

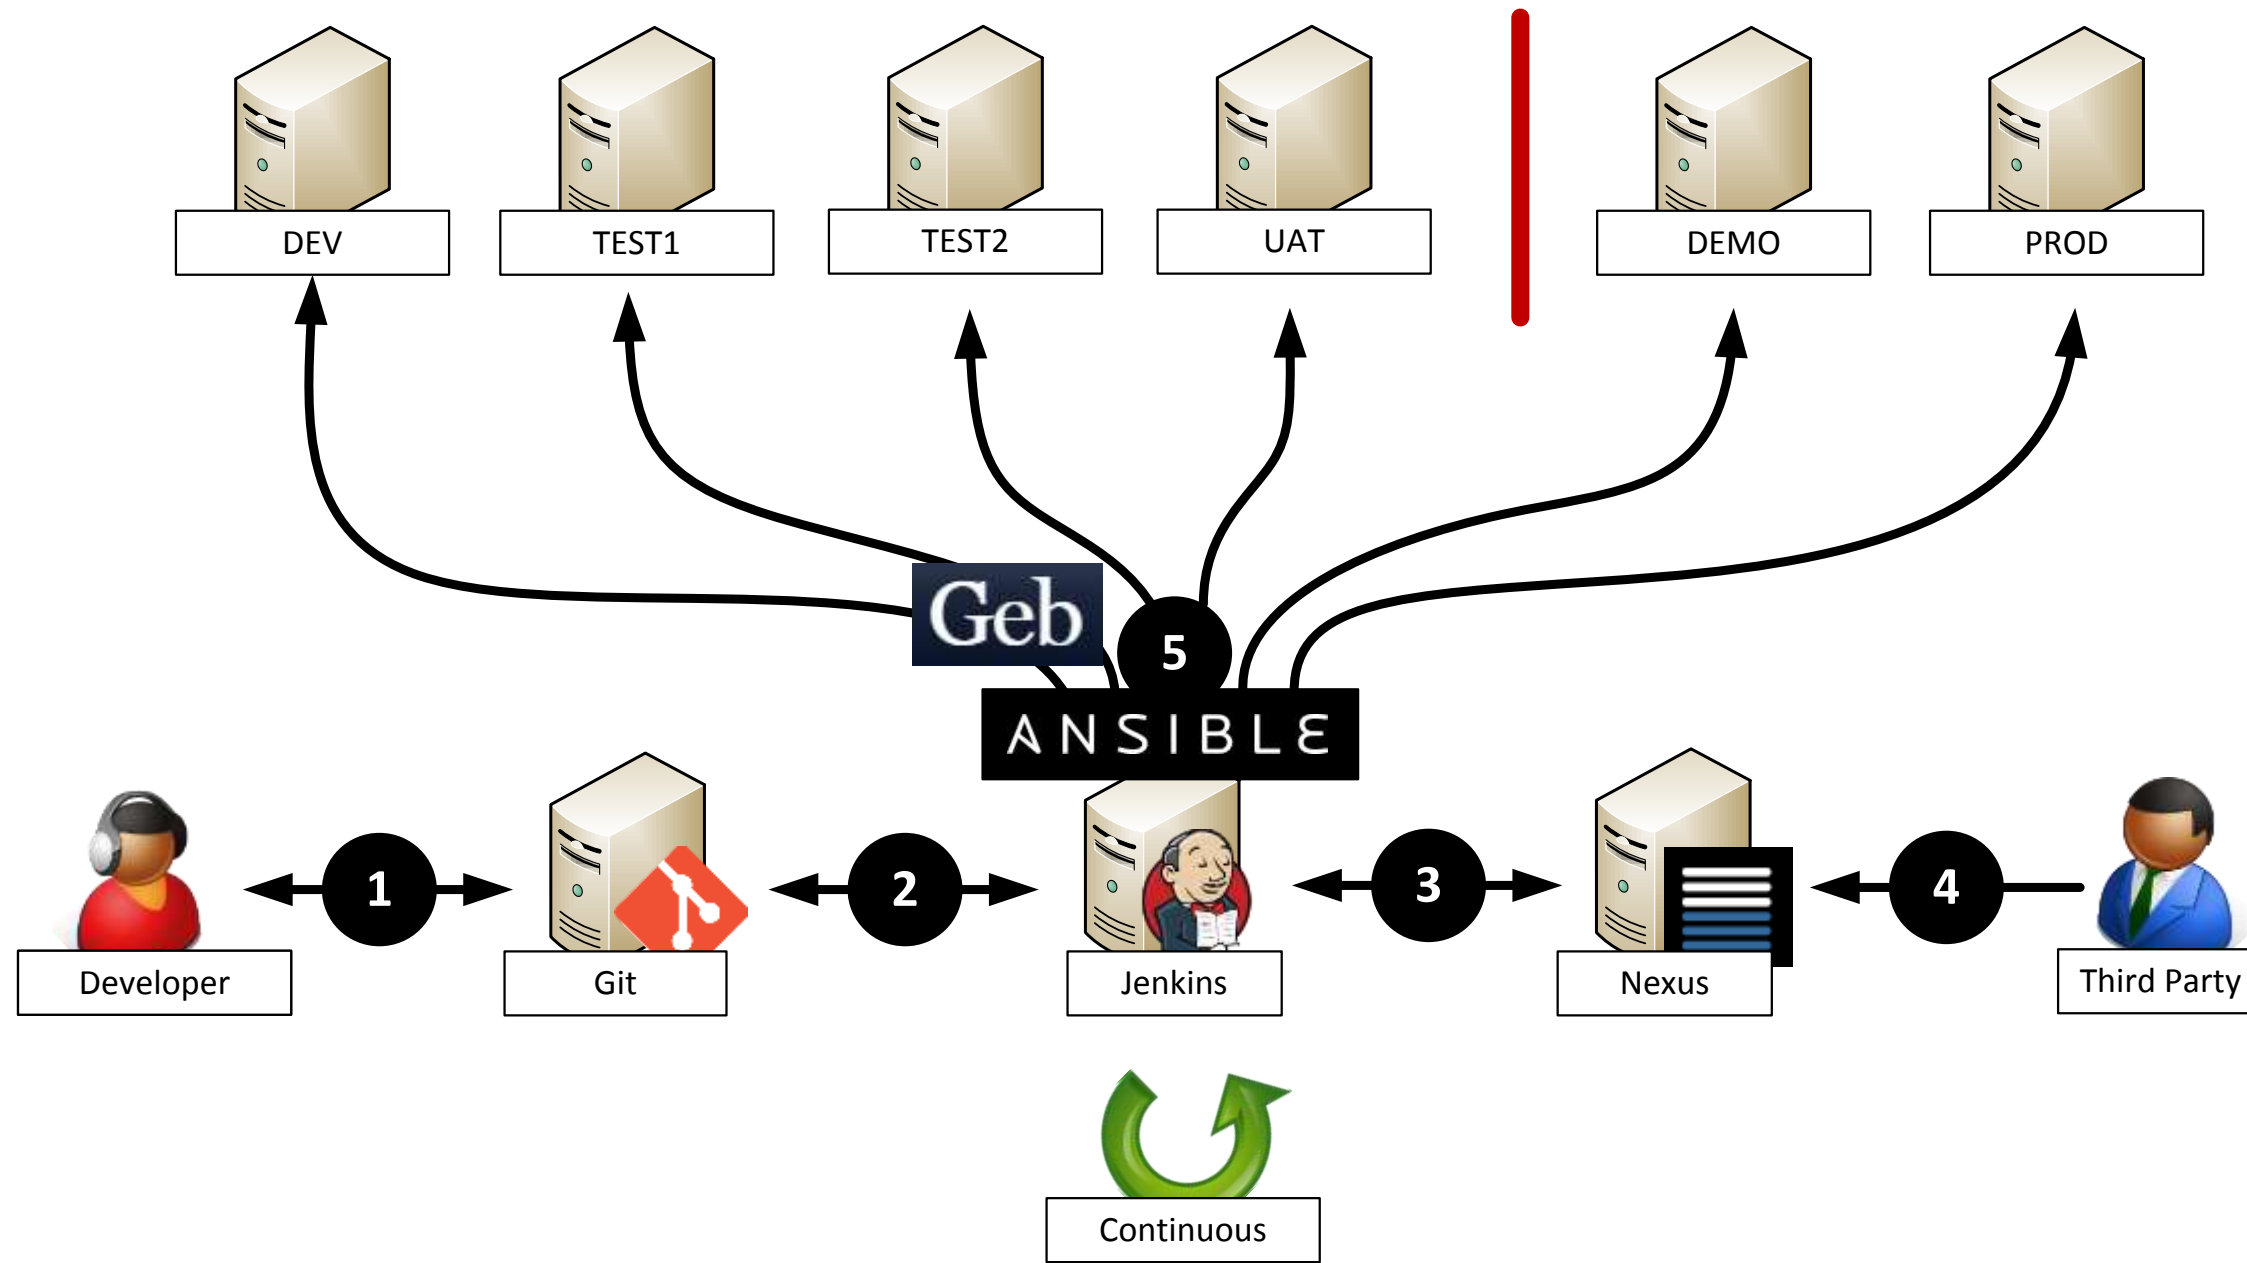

A SINGLE, INTEGRATED PLATFORM FOR HYBRID CLOUD LIFECYCLE MANAGEMENT

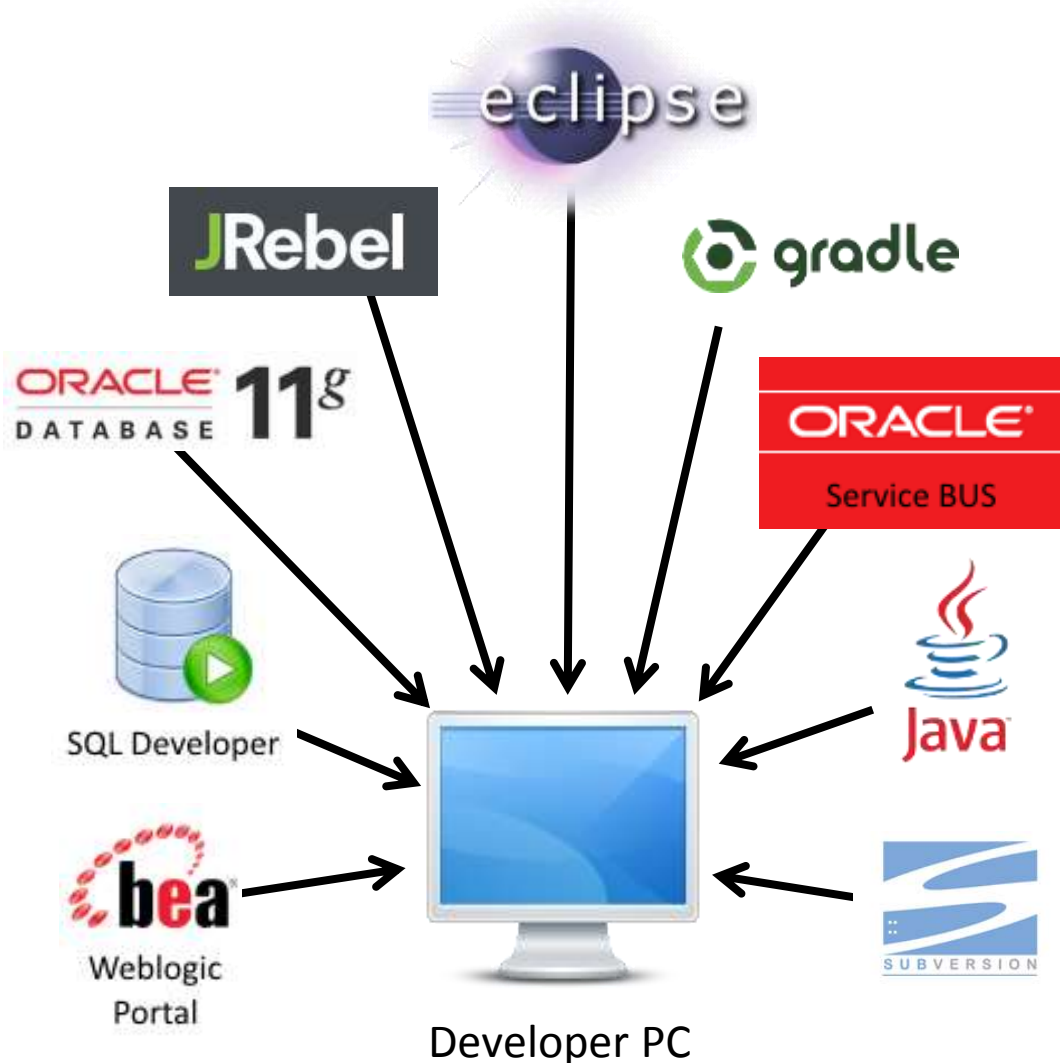

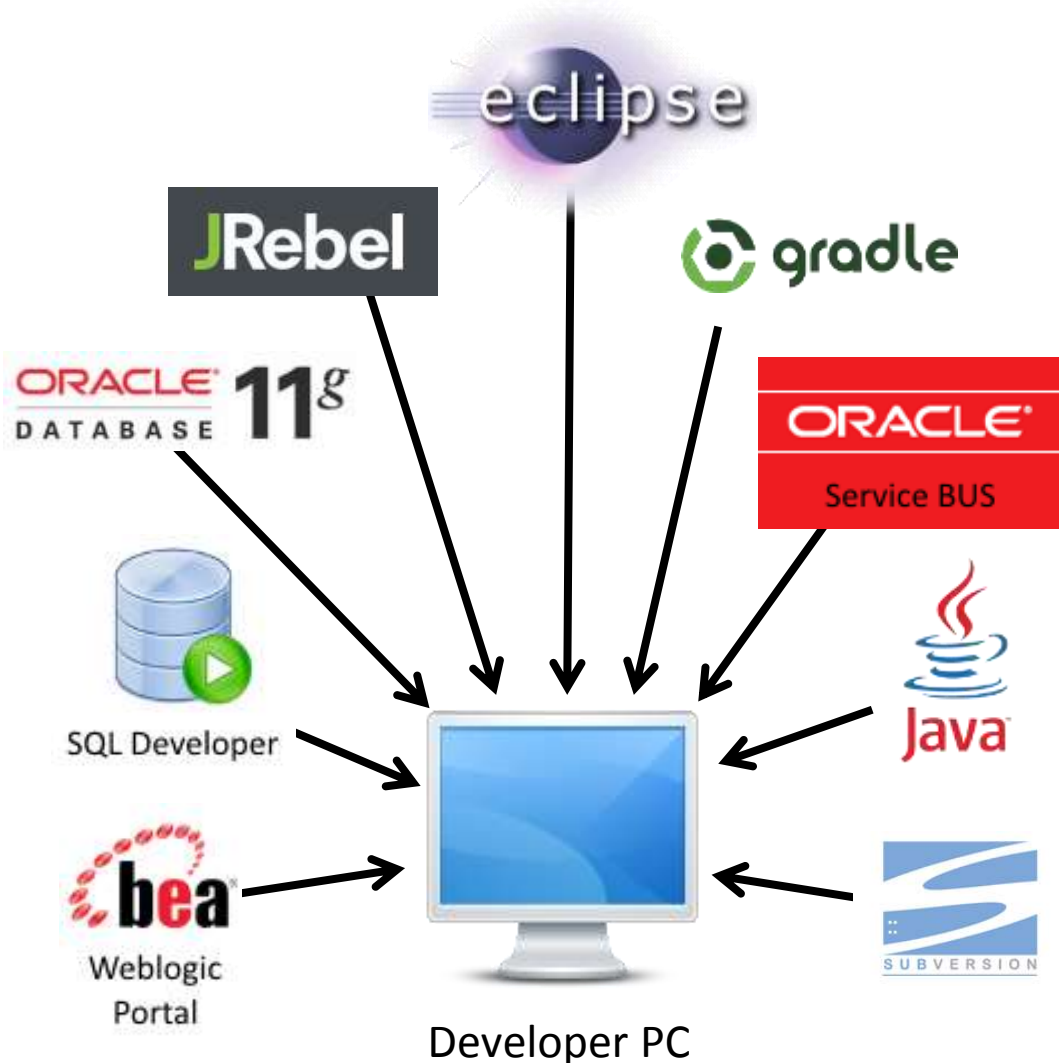

- Application-centric cloud management
- Extensible policy-driven governance
- Application release automation
- End-to-end security model
- Self-service store
- Enterprise scalability

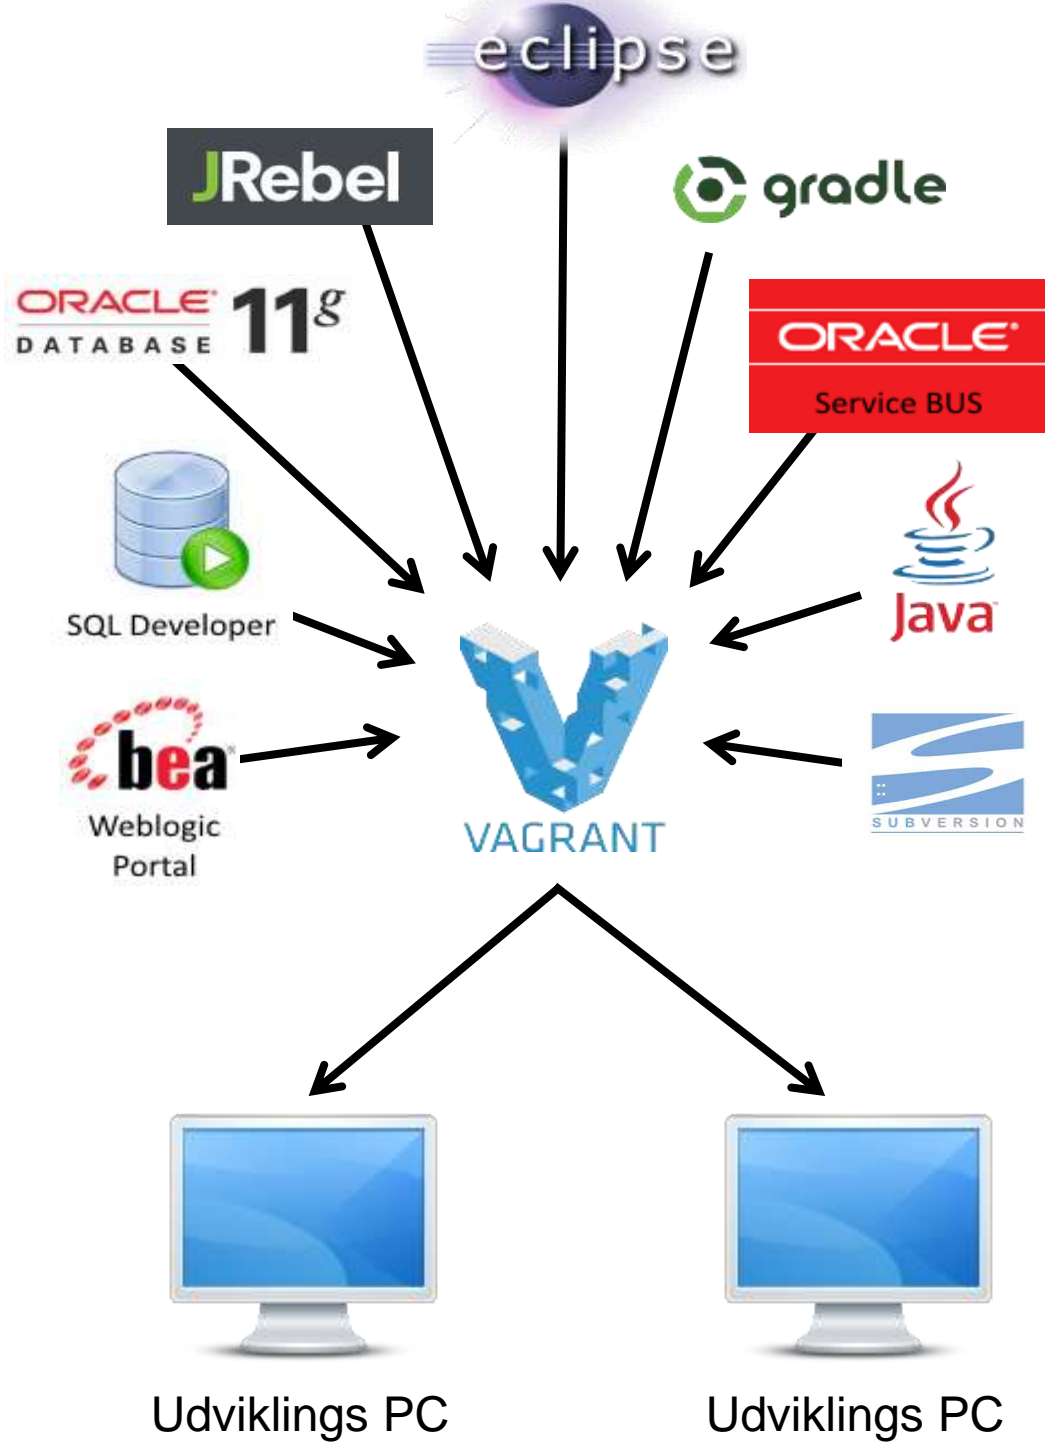

Practical Examples

Practical Examples – Public Sector

Practical Examples – Public Sector

CSC NORDIC GRADUATE PROGRAM

Svitlana Tsiukh
Junior Manager
2015.04.03

GROW IN AMAZING WAYS

- 2-year program
- Mentoring and individual training & development
- A flexible structure with an individual approach
Allows for adaptations during the program to support training and desire for future career
- Rotations - depending on qualifications and goals you might get the chance to rotate to further strengthen your profile
- Positions offered in 7 different tracks - business and technical profiles needed;
Account Delivery Management | Finance | Sales | Project Management |
Application Delivery | Application Design & Analysis | Infrastructure Delivery

Who are we looking for?

- You have *recently* completed college/university or postgraduate studies in business, management, computer science or similar with outstanding grades.
- You have work experience from your studies.
- You are fluent in English and preferable one/or more of the Scandinavian languages.

Positions in

- *Denmark*
- *Norway*
- *Sweden*
- *Lithuania*

APPLY BY
21 APRIL 2015

CSC's Graduate Program starts 1 September 2015.
Read more about the program and find out how
to apply on www.csc.com/talent
